EDUCATION

Bachelor of Arts - Data Science major, Environmental Studies minor

May 2026

Macalester College, St. Paul, MN

GPA: 3.77

Relevant Coursework: Introduction to Computer Science (Python), Introduction to Data Science (R), Computational Linear Algebra, Probability, Introduction to Statistical Modeling (R), Intermediate Data Science (R), Correlated Data, Bayesian Statistics, Data Structures (Java), Statistical Machine Learning (R)

INDEPENDENT PROJECTS

Clustering Analysis of CES (Cooperative Election Study) survey

Actively working

- Created 9 clusters as analogs for a multi-party system, analyzing using demographic and geographic data
- Utilized *tidyverse* libraries for data cleaning and manipulation, *mice* for imputation and *cluster* for clustering
- Building an interactive website to explore the makeup of each “party” with a focus on data visualization
- Planning to utilize *tidycensus* to help model what an election might look like in a multiparty system

Interactive NBA Shot Chart Web App

- Using the *hoopr* package, I built a robust web app to explore shooting trends of every nba player since 2002
- Combated large data size by using the *plumber* and *duckdb* libraries, creating an API endpoint and database
- Combined R scripts with larger technology stack showing my ability to integrate R code into a broader project

RELEVANT EXPERIENCE

Teaching Assistant (*Intermediate Data Science, General R Preceptor*), Macalester College

September 2023-May 2026

- Empowered students to ask questions during office hours, ensuring that they felt comfortable and supported
- Acted as a secondary instructor helping lead lectures and working directly with students on activities during class
- Led seminars on topics in R such as animation and Python-R development, as well as a seminar on basic Tableau

Data Science Intern, Aon Inc.

June 2025-September 2025

- Developed a Power BI dashboard reducing marketing campaign launch time from 12 to 2 weeks
- Utilized Snowflake and Databricks to query from large data sets and run complex machine learning models
- Showed persistence and resourcefulness by learning PowerBI, Snowflake, Databricks, and SQL independently

Summer Research Assistant, Macalester College

May 2024-August 2024

- Co-wrote a paper on age heaping in surveys used to model child mortality in sub-Saharan Africa
- Ran a simulation study in R to investigate effects of age heaping on common modeling techniques
- Refactored our code to run in parallel in R, using Slurm on a computing cluster to execute the simulation

SKILLS

Programming languages: R, Python, SQL, GIS, Slurm, Java, HTML, CSS, Javascript, D3, Svelte

Software: Databricks, Tableau, PowerBI, Snowflake, Microsoft Office, Adobe Illustrator, Figma

Statistical modeling methods: time series, longitudinal, spatial, bayesian, (un)supervised machine learning

LEADERSHIP AND ACTIVITIES

President, Macalester College Open Ultimate Frisbee

January 2024-May 2026

- Led 30-35 student athletes both on and off the field, building a successful ultimate frisbee program
- Developed necessary communication skills to lead practices, huddles, and outside team events
- Delegated tasks to other captains, empowering them to make essential contributions
- Organized a high school tournament for 3 years, building community and important connections
